

Romans 1: 18 - 23

-No Secret, No Surprise, No Excuse

II

**-Proverbs 6:6 (ESV) Go to
the ant, O sluggard;
consider her ways, and be
wise.**

-Proverbs 30:24-28 (ESV) 24 Four things on earth are small, but they are exceedingly wise: 25 the ants are a people not strong, yet they provide their food in the summer; 26 the rock badgers are a people not mighty, yet they make their homes in the cliffs; 27 the locusts have no king, yet all of them march in rank; 28 the lizard you can take in your hands, yet it is in kings' palaces.

**1) No other gods in the place of
God;**

**2) Make no image you think
represents God in any way;**

3) Do not use His Name in vain;

**4) Keep the Sabbath and make
it holy**

-Matthew 22:37-40 (ESV) 37 And he said to him, “You shall love the Lord your God with all your heart and with all your soul and with all your mind. 38 This is the great and first commandment. 39 And a second is like it: You shall love your neighbor as yourself. 40 On these two commandments depend all the Law and the Prophets.”

**-State standards in SC.912
which is dealing with the
subject of science for 9-12
grades**

-“Explain how the scientific theory of evolution is supported by the fossil record, comparative anatomy, comparative embryology, biogeography, molecular biology, and observed evolutionary change.”

-SC.912.N.2.1 Identify what is science, what clearly is not science, and what superficially resembles science (but fails to meet the criteria for science).

-Whatever is claimed to be scientific fact must be observable, testable, and repeatable.

**-Is anything observable,
testable, and repeatable
supporting the theory of
evolution by the fossil
record, comparative
anatomy, comparative
embryology, biogeography,
or molecular biology? No.**

-Has ANY creature ever been observed changing into another kind of creature? No.

-Has ANY mechanism ever been demonstrated to provide an INCREASE in genetic information in ANY living creature? No.

-“Content Limits”

-Items assessing the fossil record will not require understanding of the specific mechanisms used for relative dating and radioactive dating.

-Every single dating method begins with unproven assumptions.

**-Items will not assess the
origin of Earth.**

-Items will not assess specific knowledge of the formation of microspheres or the evolution of RNA and DNA.

-There HAS to be an Intelligence external to that primordial soup that sets the rules of grammar and syntax and then programs into all the little mechanisms the ability to read that code.

-The code these mechanisms need to read in order to build this living being is required to preexist these mechanisms in order for these mechanisms to exist to begin with.

**-Items will not assess
types of genetic mutation
or how these mutations
occur.**

-All mutations either misappropriate the information already existent or they lose it altogether which is by far the norm.

-SC.912.N.1.3 Recognize that the strength or usefulness of a scientific claim is evaluated through scientific argumentation, which depends on critical and logical thinking, and the active consideration of alternative scientific explanations to explain the data presented.

-Items will not assess the differences among intelligent design, creationism, and the scientific theory of evolution.

-Items assessing a scientific claim, the development of a theory, or the differences between theories and laws are limited to the scientific theory of evolution.

**-1919 Universe - infinite in
size Earth ~ 1.6 billion**

-1929 Edwin Hubble's calculations used to determine the universe to be 2 billion yrs old while at the same time geologists were calculating the earth to be 3 billion yrs old.

**-1955 Universe estimated
at ~ 6 billion because a
telescope could see
further than before and
Walter Baade adjusted
Hubble's values.**

-1965 Universe ~ 10-25 billion yrs old because they were then observing quasars and Alan Savage fiddled with Hubble's numbers a little bit more.

-1993 Universe ~ 12-20 billion yrs old because of more observations of quasars and they admitted Hubble's constant values weren't real certainly constant.

-2006 Universe ~ 13.7 billion yrs old and they claimed to have finally nailed down the value of Hubble's Constant.

Our Sun

Perseus Arm

Local Arm

Sagittarius Arm

Center
of Galaxy

-1) The expansion pressure of gas is far greater than than pull of gravity upon the gas particles in relation to one another so how do you coax all these gas particles to get together unnaturally?

-No star formation has EVER been observed. Any time you hear someone say they know exactly how stars are formed, ask them when they or anyone else has ever observed this to prove such things happen.

-The earth's magnetic field was an estimated 20x stronger at creation than it is today—only about 6000 yrs later. If the earth were just 60,000—not 60 million or 4.5 billion yrs old the magnetic strength would be that of a neutron star which would rip the atoms of our bodies apart.

-Why are the magnetic fields of these planets in our solar system so strong right now if they are supposedly 4.5+ billion yrs old when we know the current decay rate only allows for a scale of thousands of years and not billions of years?

- 1) The models require the magnetic fields to be lined up with the planet's rotation axis and that's not what we find. Uranus' is off by 59 degrees and Neptune's is similar.**
- 2) There is zero evidence that such a mechanism exists.**

-The moon is receding from the earth at a current rate of about 1 1/2 inch per yr. In the past that would have been much faster because of the tidal pulls. At creation this would have put the moon about 730 ft closer.

-Comets can last no longer than about 100,000 yrs. If the solar system is 4.5 billion yrs old there shouldn't be any comets.

**-The Oort Cloud—
something no one has ever
observed.**

-Not enough sediment from the continents on the ocean sea floors for billions of years.

-The current levels of sediment would accumulate in only 12 million years—not billions.

-Soft tissue (blood vessels, cells, protein) has now been found in many supposedly tens of millions of yrs old fossils.

-Helium in radioactive rocks is a major problem because it should have leaked out after only 100,000 yrs. But it's still there in abundance in rocks supposedly billions of years old.

**-Carbon-14 found in fossils,
coal, and diamonds that
are supposed to be
hundreds of millions to
billions of years old.**

**-Very little salt in the sea.
At today's rates, if the
oceans began fresh and
salt-free, the oceans would
have reached the current
salt level in 42 million yrs
—not 3 billion.**
